

GRE PSR-300 make earphone jack into speaker jack with more audio level

It seems like ear phone jack of GRE PSR-300 handheld receiver is made for ear phone , but not for external speaker. It appear that reduced audio level go out of ear phone jack compare to level going to internal speaker. So I did some modification to make output of earphone jack have more audio level , so can be used as speaker jack. Internal Speaker of GRE PSR-300 is not the best because it is small size.
